HEMATULLAH WAZIRI

Full Stack Developer

0780 154 644 | hematullahw@gmail.com | Kabul, Afghanistan

PROFILE SUMMARY

Full-stack developer with real experience building payment systems and complex web platforms. I previously worked at AfghanPAY on mobile top-up and digital payment platforms — handling secure transactions, API integrations, and keeping production systems stable. Currently at Green State Power working on Connectub, a multi-module business platform, using microservices so different parts of the system can scale independently. Comfortable with Node.js, Express, PostgreSQL, MongoDB, Redis, RabbitMQ, and Docker. Most of my frontend work has been with React and Next.js, but I pick up new tools quickly and I'm ready to work with Angular. Currently finishing a Computer Science degree at Kabul Polytechnic University.

TECHNICAL SKILLS

Frontend: Next.js, React.js, Redux, React Query, Tailwind CSS, Zustand, JavaScript (ES6+), TypeScript

Backend: Node.js, Express.js, Nest.js, REST APIs, WebSockets, authentication & RBAC, Socket.IO, WebRTC, RabbitMQ, microservices

Data & Caching: PostgreSQL, MongoDB, Mongoose, Redis, SQL query design and optimization

DevOps & Tools: Docker, Nginx, Linux, PM2, Git/GitHub, Postman, Jest

FinTech: Payment flows, secure transaction processing, API integrations, idempotent design, production monitoring

WORK EXPERIENCE

Full Stack Developer

Green State Power | 2025 – Present

- Working on Connectub (connectub.com), an all-in-one business platform that brings jobs, tenders, B2B marketplace, property listings, investments, and company networking into one place.
- Designed and built microservices for the main modules (marketplace, tenders, user accounts, listings) so each part can be developed, deployed, and scaled on its own without affecting the rest of the system.
- Built the frontend with Next.js and React, and handled backend services, APIs, and data flow between the different microservices.
- Containerized services with Docker and set up authentication plus role-based access so users and businesses can safely use the platform.

Full Stack Developer

AfghanPAY | 2024 – 2025

- Worked on the full-stack side of mobile top-up and payment systems using Next.js, Express.js, Nest.js, MongoDB, PostgreSQL, and Redis.
- Built REST APIs and handled secure transaction flows, including authentication and role-based access control.
- Used RabbitMQ for background processing of top-up requests and other payment-related jobs.
- Improved performance with caching and NGINX, deployed with Docker, and helped keep production systems running smoothly.

Frontend Developer

SobhanSoft Afghanistan | May 2024 – August 2024

- Part of the Mowlana developer community (started by an IBM engineer).
- Worked on MERN stack projects, including Tech News — a site for sharing tech updates.

Backend Developer Intern

MCIT Afghanistan | January 2023 – March 2023

- Built a typing test app that measures speed in real time.
- Wrote backend code and worked with the team to get the project delivered.

KEY PROJECTS

Gapistan — Real-time Chat Platform
Chat app with messaging, file sharing, and audio/video calls. Built with React, Node.js, Socket.IO, and WebRTC.

100-Khana Platform — Real Estate Marketplace
Full-stack platform for renting, buying, and mortgages. React, Tailwind, Node.js, Express, MongoDB. Google Maps integration. Deployed with PM2 and Railway.

Tech News — Developer Newsletter
MERN stack app for tech news and updates. Clean UI and structured backend.

EDUCATION

BSc Computer Science (Information Systems) — Kabul Polytechnic University | 2021 – 2025

Frontend Development — Scrimba | 2023 – 2024 • Full Stack Development — CodeWeekend | 2023 – 2024

Languages: English (Professional working proficiency) • Dari (Native) • Pashto (Professional working proficiency)
